MACHINING OF METALS

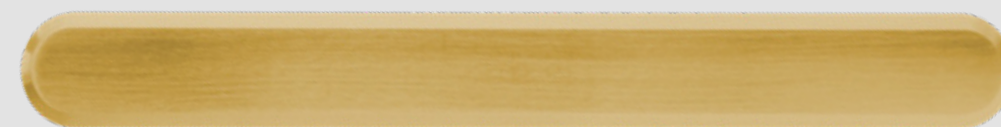

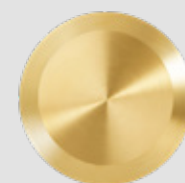

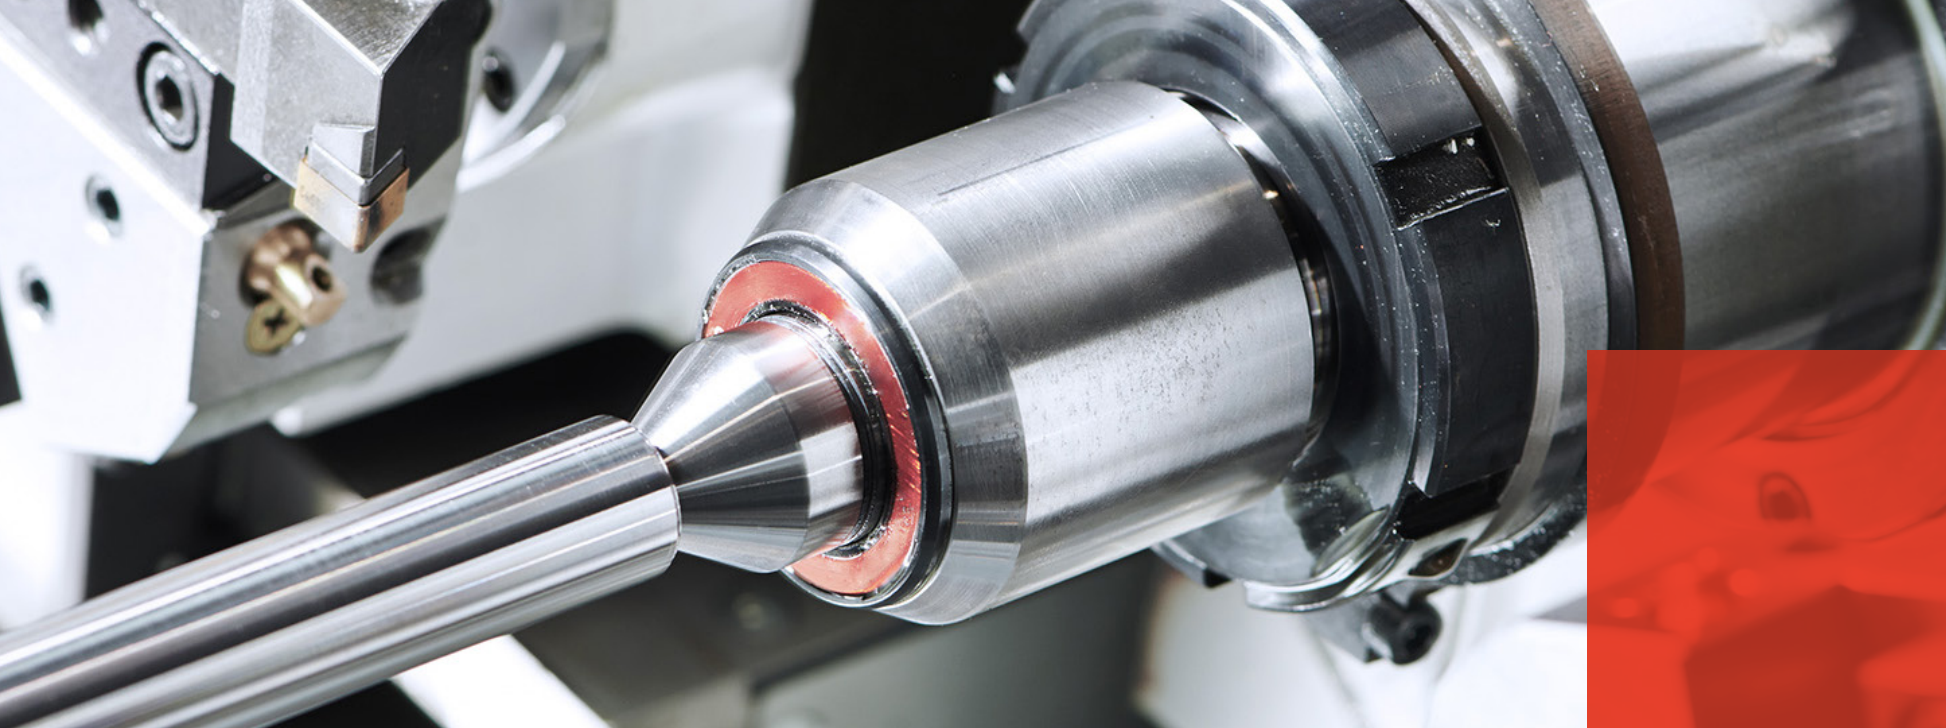

CNC PRODUCTION OF ROTARY PARTS TURNING

Based on your drawings, we manufacture **difficult to make circular parts up to the diameter of 38 mm** in production batches according to customer requirements. **Optimal manufacturing conditions.**

We offer you a capacity of **CNC long - short turntable machines** and three-axis milling centres in one locality, in the town of **Bardejov**. **Highly skilled specialists** manufacture complex products for you with the most advanced machines and, together with our quality management, we are able to guarantee you a **high standard of the components we supply**. Our turned parts **will be individually customized in accordance with your requirements**.

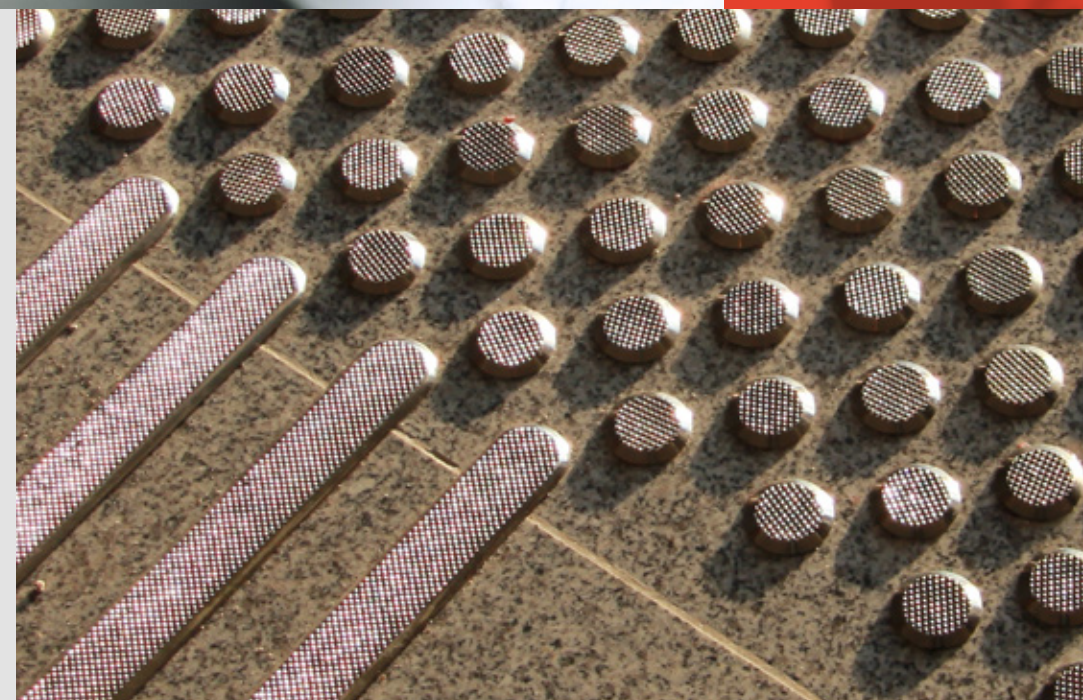

In accordance with your specifications, we can procure and process all common materials such as steel, stainless steel, alloy and non-ferrous metals.

In order to optimize and economize our processes and work flows, we can cooperate closely with your Design department. For many years, the **CITIZEN** machines belong to the world's leading brands in the area of long-turning machining of rotary parts.

CNC MILLING

We are **specialists in CNC milling**, offering **fast and accurate results** using our three axis CNC milling machines. Our milling machines are equipped with both workpiece and tool probes and have internal cooling, which ensures optimum machining quality.

Our capabilities include milling of a variety of materials, including cast iron and non-ferrous metals such as stainless steel, bronze, brass, copper and aluminium. We are able to process parts with maximum dimensions of 900 mm x 500 mm x 400 mm, while guaranteeing a **standard precision of 0.03 mm**.

Our **CNC milling technology** is efficient and reliable, allowing us to create **precision parts and components for a wide range of industries**. We are ready for the challenges of your projects and look forward to working with you.
